Where the angular-gap improvement appears
Each row changes only the listed training factor
Lower tau .07 -> .035
at lambda=.1, c=1
13.62 deg
Raise lambda .1 -> .2
at tau=.07, c=1
32.68 deg
Raise lambda .1 -> .2
at tau=.035, c=1
29.70 deg
Raise lambda .1 -> .2
with both c and tau learned
30.66 deg

Reduction in mean angular excess (degrees)
Decrease in exterior angle phi
Increase in cone half-aperture psi
Arithmetic identity: gap reduction = phi reduction + psi widening; not a causal mediation analysis.
